

The complete au pair relationship platform

Pair is a five-phase SaaS platform built around the complete lifecycle of a host family / au pair relationship — from the first interview through the final handover. Every module is grounded in real templates built by real host families. No other product does this. Not one.

Phase 0 · Pre-Match

Phase 1 · Onboarding

Phase 2 · Year Management

Phase 3 · Performance

Phase 4 · Transition

THE PROBLEM

Every tool stops at the match. The hard part starts after.

Matching platforms have been well-funded, well-built, and well-marketed. Cultural Care, AuPairCare, AuPairWorld — they do a credible job helping families find an au pair. But the moment the match is made and the au pair walks through the front door, families are entirely on their own.

What follows is a year-long management relationship unlike anything most families have navigated before. It combines elements of employment, live-in cohabitation, childcare oversight, cultural exchange, and personal mentorship — all at once, with someone who may have never managed anything at all.

"Families must tell an au pair exactly what they want — not assume she knows when it's time to change the baby, etc."

— Berkeley Parents Network, aggregating years of host family experience

The failures that result are not relationship failures. They are management failures — born of unclear expectations, undocumented hours, no framework for feedback, and no tools designed for this relationship. They are entirely preventable.

The Core Insight

The au pair relationship has five distinct phases, each with specific information needs, coordination challenges, and emotional dynamics. No existing product addresses more than one of them. Pair addresses all five — with every feature grounded in real templates built by real host families, not invented from first principles.

Phase 0

Pre-Match

Interview &

Feedback, check-ins
& growth

Phase 4

Transition

Off-boarding &
handover

A note on the evidence base

The feature set described in this document is not speculative. It is derived from real artefacts built by the founding team across multiple au pair placements: a structured interview template (11 sections), a detailed host family guidelines document (8 sections including per-child profiles and meal plans), a live timesheet (August 2025 – present, with split shifts and overtime calculations), a summer schedule planner (multi-person, hour-by-hour), and a weighted quarterly performance review with a five-level rating rubric and per-criteria definitions. These documents collectively represent what the product needs to replace and what it needs to make the default.

Competitive Landscape

The market is crowded for matching. It is empty for management. The distinction matters because the two problems require fundamentally different products.

Platform	Matching	Interview Kit	Onboarding Brief	Hours / Compliance	Year Planning	Performance Mgmt	Au Pair Support	Off-boarding
Cultural Care / APIA apps	✓	✗	△ tips	△ basic	✗	✗	✗	✗
PairTrack	✗	✗	✗	✓	△ limited	✗	✗	✗
Cozi / Google Calendar	✗	✗	✗	✗	△ generic	✗	✗	✗
Blog PDFs / checklists	✗	✗	△ static	✗	✗	✗	✗	✗
Pair (proposed)	✗	✓	✓ full	✓	✓	✓ full	✓	✓

On PairTrack specifically

PairTrack is the closest existing product and is well-regarded in host family communities for solving the basic hours-logging problem. It handles time entry and has some awareness of the J-1 45-hour cap. **Pair does not compete with PairTrack's core feature — it encompasses it.** Pair adds split-shift logging, planned vs. actual hours, automatic stipend calculation with overtime tracking, school calendar integration, summer planning, compliance nudges, and a year-view that PairTrack does not offer. A partnership or acquisition conversation with PairTrack's team is worth exploring as a route to inherit their existing user base and accelerate growth.

The Shared Data Layer: Child Profiles

One of Pair's most significant structural advantages over any potential competitor is the child profile — built once during onboarding, and referenced across every subsequent module. This is not a nice-to-have; it is the connective tissue of the entire product.

Per-Child Profile — Built Once, Used Everywhere

Each child's profile captures the information that currently lives in separate documents, WhatsApp messages, and people's heads. Once built, it surfaces automatically in scheduling, performance reviews, meal planning, summer planning, and handover documents.

Dietary needs & restrictions
Communication style & devices
Emotional regulation approach
Preferred activities & triggers
Learning goals & stage
Potty / independence status
Social development notes
Medical & allergy info
School schedule & pick-up

The Product: Five Phases

The interview is where the relationship begins — and where most families are most underprepared. Pair provides a structured, guided interview toolkit that captures what matters, surfaces red flags, and seeds the onboarding documents that come next. The candidate's answers and the family's notes from this phase don't disappear after the match; they become the foundation for Week 1.

INTERVIEW TOOLKIT

→ **Structured Interview Guide** NEW

11-section guided interview covering: childcare experience, emergency handling, discipline philosophy, daily routine management, adaptability, cultural exchange readiness, driving, expectations and boundaries, special needs experience, homesickness and adjustment, and long-term commitment. Presented as an interactive guided flow — not a static form.

→ **Candidate Answer Capture** NEW

Structured fields for each section. Interviewer notes saved alongside candidate responses. Creates a lasting record of what was discussed and agreed before arrival — eliminating "but I thought you said..." disputes.

→ **Special Needs Flag** NEW

If the family has a child with additional needs, this section of the interview expands: relevant experience, behaviour plan familiarity, therapist coordination, sensory management. Answers feed directly into the child profile.

→ **Candidate Question Capture → Household FAQ** NEW

The au pair's own questions from the interview are saved and become the seed of the Household FAQ — answered by the family pre-arrival. The questions that were asked once are answered for every au pair that follows.

→ **Comparison & Shortlist** NEW

Compare multiple candidates across key criteria. Rate and annotate each interview. Export a clean shortlist for family discussion.

PHASE 1 **Onboarding — Family Brief, Expectations & Week 1**

Significantly Enriched

The onboarding module generates a complete, personalised family brief — the document that currently takes experienced host families hours to write from scratch and that most families never produce at all. It covers everything from primary responsibilities to meal plans to car rules to discipline philosophy. For the incoming au pair, it is their field manual. For the family, it is their single source of truth.

GOALS & PHILOSOPHY

→ **Family Goals Wizard**

Prompts families to articulate priorities — childcare style, cultural exchange goals, household expectations, communication preferences. Generates a shareable "family brief" sent to the au pair pre-arrival.

→ **Family Welcome Presentation Builder**

A guided, visual presentation the family customises and shares: who we are, how we live, what success looks like. Warm, human, and designed to make the au pair feel welcomed before they arrive.

→ **Discipline Philosophy Builder** NEW

Families document their approach: prior notice, time-boxing, active dialogue, processing space, choice, consequences, and hard rules (e.g., no physical discipline). This feeds directly into performance review criteria and is visible to the au pair from day one.

RESPONSIBILITIES & HOUSEHOLD RULES

→ Primary & Additional Responsibilities Template

Structured sections for childcare duties, school pick-up, laundry, food preparation and clean-up, bedroom management, and seasonal organisation projects. Configurable to the family's specific setup.

→ Housemate Expectations Section

Covers meals, kitchen clean-up, room and bathroom standards, common areas, curfew, visitor policy, and overnight guest rules. Built from real family templates — specific and actionable, not vague aspirations.

→ General Household Info Builder NEW

Appliance instructions (washing machine settings, dryer filter, dishwasher rules), HVAC and thermostat guidance, safety systems. The information that currently lives in a verbal walk-through — captured once, never repeated.

→ Safety Rules Generator NEW

Produces a family-specific safety document covering: never leaving children unattended, kitchen safety, door and window rules, medication handling, driving rules, and what to do in an emergency. Configurable by family; generates a clean PDF for the au pair's reference.

→ Screen Time & Media Philosophy NEW

Documents the family's approach to TV, tablets, and apps: daily limits, approved content, specific restrictions. Prevents silent divergence between family and au pair on a topic that causes consistent friction.

BENEFITS, CAR & TRAVEL EXPECTATIONS

→ Benefits Package Builder ENRICHED

Configurable benefits documentation: phone plan, gym membership, streaming services, transportation allowance, and any family-specific perks. Creates a clear written record of what was offered and agreed.

→ Car Sharing Guidelines NEW

Detailed, family-specific car rules: insurance coverage, geographic restrictions, curfew for car use, overnight rules, what happens in a minor incident, charging responsibilities for electric vehicles, and the pre-license transition plan.

→ Travel Expectations Module NEW

Covers family travel with the au pair: working vs. non-working time during trips, room arrangements, duty hours while travelling, international travel protocol, and what the au pair should expect when the family takes a trip.

→ Au Pair Vacation Policy NEW

Documents the mandatory J-1 two-week paid vacation, notice period requirements, blackout dates, whether vacation can be split, and the process for requesting time off. Eliminates the most common administrative dispute in au pair relationships.

→ Bonus & Recognition Philosophy NEW

Families document their approach to recognition upfront: what triggers a bonus, what "Outstanding" performance unlocks, how exceptional contributions are acknowledged. Sets mutual expectations and removes the awkwardness of ad-hoc appreciation.

CHILD PROFILES & MEAL PLANNING

→ Per-Child Profile Builder NEW

Detailed profiles for each child: dietary needs and restrictions, communication style, emotional regulation approach, preferred activities, learning goals, potty training status, social development notes, and medical/allergy information. Built once here; referenced in scheduling, performance reviews, summer planning, and handover documents.

→ Meal Plan Builder NEW

Weekly meal grid (breakfast, lunch, dinner, snacks) with per-child dietary flags, alternate options, and preparation notes. Configurable for school days vs. home days. Dietary restrictions (e.g., gluten-free) are flagged prominently throughout.

→ Weekly Household Task Template NEW

Day-by-day task assignment for recurring household duties. Automatically populates the schedule module. Removes the need to re-explain recurring tasks each week.

ARRIVAL PREPARATION

→ Household FAQ — "No Silly Questions" NEW

A living FAQ seeded by the family (how do I fold the fitted sheet? where does the blender live? what's the WiFi password?) and added to by the au pair. Questions that typically go unasked because they feel too small to raise — captured once, available always. Seeds from candidate questions captured in the interview phase.

→ Pre-Arrival Checklist

Structured "Here's How We Run Things" document covering house rules, children's routines, emergency contacts, and household expectations. The conversation that too often never happens — made mandatory.

→ Week 1 Plan Template

Day-by-day structured landing plan: coffee with parents, supervised time with children, orientation activities. Each activity annotated with its purpose — helping the au pair understand not just what to do, but why.

PHASE 2 Year Management — Time, Planning & Compliance

Significantly Enriched

The live timesheet evidence is stark: families are running sophisticated weekly calculations in Google Sheets — split shifts, planned vs. actual hours, stipend math, overtime balances, inline school calendar notes — entirely by hand. Pair replaces this with a purpose-built system that tracks the present, plans the future, and nudges families before compliance problems arise.

HOURS TRACKING & COMPLIANCE

→ Split-Shift Daily Logger ENRICHED

Two start/end time pairs per day — matching how families actually schedule au pairs (morning block + afternoon/evening block). Supports inline day notes (e.g., "No School — started early"). Both au pair and host family weekly acknowledgement.

→ Planned vs. Actual Hours NEW

Families set planned hours at the start of each week. Actual hours are logged as the week progresses. Divergences are flagged — preventing the "I thought we agreed..." moments that cause disputes.

→ Automatic Stipend Calculation NEW

Weekly pay auto-calculated from logged hours against the J-1 minimum stipend (\$195.75 baseline). Overtime and additional balance tracked separately. Running total visible to both family and au pair. No more spreadsheet math.

→ J-1 Compliance Guardrails

Real-time alerts when approaching the 45-hour weekly or 10-hour daily cap. Soft warning at 40 hours; hard alert at 44. Prevents inadvertent violations before they happen.

→ State-Specific Compliance Engine NEW

State selection is a mandatory step at account setup. Several states — most notably California and Massachusetts, but also New York, Washington, and Illinois — treat au pairs as domestic employees under state law, meaning state minimum wage applies (e.g., \$16/hr in California), overtime rules differ, and the room-and-board credit calculation changes. Once a state is selected, the stipend calculator automatically applies the correct wage floor (federal or state minimum, whichever is higher), overtime thresholds adjust accordingly, and compliance alerts reflect state-specific rules. Families who relocate mid-placement can update their state and the system recalculates proactively. No existing tool handles state-specific au pair compensation correctly — and non-compliance in California and Massachusetts is widespread among families who simply don't know the rules.

→ Sick, Vacation & Other Hours Tracking ENRICHED

Separate columns for sick hours, vacation hours, and other categories — matching the real timesheet structure. Running vacation balance visible against the J-1 entitlement.

CALENDAR & YEAR PLANNING

→ Year-View Calendar with School Integration **ENRICHED**

"No School," "Early Release Day," and "Federal Holiday" as first-class, colour-coded calendar event types — matching the categories families already track. US school districts pre-loaded for the top 50 markets; manual import for others.

→ Typical Week Templates

Set a standard weekly schedule that auto-populates future weeks. School-year and summer templates maintained separately. Deviations from the standard week are flagged, not silently accumulated.

→ Holiday & Break Planner

Identifies the four to six major scheduling pressure points in the year (Thanksgiving, winter break, spring break, summer). Proactive reminders 3–4 weeks ahead with guided prompts for family/au pair alignment conversations.

→ Summer Planner Mode **NEW**

Activated when the school year ends. Helps families build a structured summer day with named activity blocks (outdoor time, quiet time, lunch, structured engagement, etc.). Supports anchor activity scheduling (camps, swim lessons, orientations). Handles multi-person coordination when a second caregiver is involved. Includes a caregiver handover log for mid-summer transitions.

COMMUNICATIONS & ALIGNMENT

→ Communications Log **NEW**

A neutral, shared record of agreements, schedule changes, and important conversations. Not a chat tool — a running log that protects both parties and creates clarity when memories diverge. Timestamped, searchable, and exportable.

PHASE 3 Performance Management — Feedback, Check-ins & Growth

Significantly Enriched

The founding team's quarterly performance review — weighted categories, two-column feedback format, five-level rating scale with per-criterion definitions, personal closing note — is the gold standard for what this module should produce. Pair makes this the default, not the exception. Most families have no framework at all; Pair gives them one that works.

STRUCTURED REVIEW SYSTEM

→ Weighted Category Review Template **ENRICHED**

Four configurable categories with family-set weights (e.g., Overall Childcare 30%, Child Engagement 40%, Household Membership 10%, Personal Growth 20%). Sub-criteria per category drawn from the child profiles and discipline philosophy set in onboarding.

→ Two-Column Feedback Format **ENRICHED**

What's Working Well / Growth Areas per sub-category — the format that makes feedback both affirming and actionable. Guided prompts prevent families from leaving sections blank or defaulting to vague generalities.

→ Five-Level Rating Scale with Definitions **ENRICHED**

Weak → Improvement Required → Good → Great → Outstanding. Each level has a specific behavioural definition per sub-category — not just a label. Families understand what "Outstanding" looks like before they assign it. Au pairs understand what they're being measured against.

→ Baseline Comparison **ENRICHED**

Each review captures the prior period's rating as a baseline. Progress (or regression) is visible at a glance. Creates a narrative of development over time.

→ Bonus & Recognition Trigger **NEW**

When the review is complete, the system checks it against the bonus philosophy set in onboarding. If "Outstanding" criteria are met, the family is prompted to action the recognition they committed to upfront. Closes the loop between expectation-setting and reward.

→ **Personal Closing Note**

A guided prompt for a warm, personal closing message from the family — the human moment that contextualises the structured feedback and reminds both parties why the relationship matters.

ONGOING CHECK-INS & RELATIONSHIP HEALTH

→ **Monthly / Quarterly Check-in Templates**

Lighter-touch structured conversation guides for scheduled sit-downs between formal reviews. What's working, what could improve, what both parties need more of. Warm, not bureaucratic.

→ **Two-Way Feedback System**

Both family and au pair can give and receive feedback through the platform. Normalises the au pair's voice and reduces the power imbalance that causes small frustrations to become silent resentments.

→ **Relationship Health Pulse**

A monthly 2-3 question sentiment check-in for the family (private, not shared with the au pair). Surfaces patterns over time and prompts a conversation before a small issue becomes a big one.

→ **Difficult Conversation Guides**

Situation-specific templates for the conversations families dread: hygiene, phone use with children, cultural differences around food or bedtime, performance not meeting expectations. Pre-written frameworks that help families say hard things with warmth.

AU PAIR SUPPORT SECTION NEW

→ **How to Receive Feedback**

A guide for au pairs on how to hear and process feedback constructively — particularly in a relationship where the power dynamic makes this genuinely difficult. What to listen for, how to ask clarifying questions, how to respond without becoming defensive.

→ **How to Give Feedback to Your Host Family**

Templates and prompts for au pairs to raise concerns, request changes, or flag things that aren't working — in a way that is respectful, clear, and likely to be well-received.

→ **How to Ask for What You Need**

Practical guides for common au pair needs: more food, a household appliance, a conversation about working hours, or simply feeling like part of the family. The things that go unasked because they feel too small or too awkward — normalised and made easy.

→ **Programme Rights Reference**

A plain-language summary of the au pair's J-1 rights: maximum hours, minimum stipend, mandatory vacation, educational requirements, and what to do if they feel these are not being honoured. Not legal advice — informed awareness.

Most families host 2–3 au pairs over their childcare years. A well-managed transition creates a positive ending for the departing au pair, dramatically reduces the ramp-up time for the incoming one, and protects the continuity of care for the children. Pair makes good off-boarding the default — and makes mid-year summer transitions as well-managed as end-of-year ones.

OFF-BOARDING & TRANSITION PLANNING

→ **60-Day Transition Countdown**

Prompts families to begin the transition process 60 days out: conversation with the au pair about next steps, administrative tasks (visa extension check, final stipend calculation), and child preparation. Nothing falls through the cracks.

→ **Knowledge Transfer Document**

Built collaboratively with the departing au pair. Structured around the child profiles set in onboarding — capturing current routines, what has changed, what works, what to watch out for. Automatically formatted as a briefing for the incoming au pair.

→ **Caregiver-to-Caregiver Handover Session** NEW

Guided prompts for a structured briefing from the departing to the incoming caregiver — covering each child's current state, relationship dynamics, unwritten household rules, and practical tips that never make it into documents. The "leverage Asia" insight formalised into a product feature.

→ **Summer-to-Fall Transition Mode** NEW

Mid-year transitions (e.g., transitioning from one summer caregiver to the school-year au pair) are handled with the same structured handover flow as end-of-year transitions — not treated as an informal changeover.

CLOSING THE RELATIONSHIP WELL

→ **Year-in-Review Auto-Summary**

Auto-generated from logged data: total hours worked, goals achieved, performance trajectory, milestones. A meaningful gift to the departing au pair — and a useful record for the family.

→ **Reference Letter Builder**

Guided prompts that help families write a genuine, specific reference letter. Draws from the performance review history. Makes it easy to give the au pair a meaningful professional endorsement for their next chapter.

→ **Family Retrospective** NEW

What worked, what to do differently next time, what to look for in the next au pair. Saved in the family's account and surfaces as context when they begin the interview process again — closing the loop back to Phase 0.

Market Opportunity

The US au pair programme places approximately 20,000 au pairs per year, with an active installed base of 25,000–35,000 host families when accounting for multi-year hosts. The global au pair services market exceeds \$1 billion and is growing at approximately 8% annually, with North America and Western Europe as the primary markets.

Pair targets the host family as its primary paying customer. The au pair support section is free for au pairs — making the product genuinely two-sided and creating a viral distribution channel through the tightly-networked au pair community.

Tiered Pricing: Simple by Default, Powerful by Choice

The product universe described in this document is comprehensive — but no busy family should feel confronted by all of it at once. Pair is designed around progressive disclosure: families start with the features they reach for every week, discover the platform's depth over time, and upgrade naturally when they hit the ceiling of their tier. Every tier is complete in itself — not a crippled version of the next one up.

STARTER

\$9

/mo

The everyday essentials. Built for the family who has never used a management tool before and wants to solve the two biggest daily pain points: hours and schedule.

✓ Weekly hours logger (split-shift)

✓ Stipend auto-calculation

✓ State-specific compliance engine

✓ J-1 guardrails (45hr / 10hr alerts)

✓ School calendar (No School, Early Release)

✓ Typical week template

✓ Communications log

✓ Basic onboarding checklist

✓ Au pair support section (always free)

PRO

MOST POPULAR

\$15

/mo

The full management toolkit. For families who want to run the relationship well — not just track the hours. Covers onboarding, planning, and performance.

✓ Everything in Starter

✓ Full family brief wizard

✓ Child profiles (dietary, emotional, learning)

✓ Meal plan builder

✓ Discipline philosophy builder

✓ Household FAQ builder

✓ Holiday & break planner

✓ Summer planner mode

✓ Quarterly performance review

✓ Monthly check-in templates

✓ Difficult conversation guides

✓ Relationship health pulse

✓ Bonus & recognition module

- ✓ Two-way feedback system

PREMIUM **FULL LIFECYCLE**

\$22/mo

The complete lifecycle platform. For experienced host families who want to manage the relationship from the first interview to the final handover — and carry that knowledge into the next placement.

- ✓ Everything in Pro
- ✓ Interview toolkit (11 sections)
- ✓ Candidate comparison & shortlist
- ✓ 60-day off-boarding countdown
- ✓ Knowledge transfer document
- ✓ Caregiver handover session guide
- ✓ Year-in-review auto-summary
- ✓ Reference letter builder
- ✓ Family retrospective
- ✓ Safety rules PDF generator
- ✓ Car & travel expectations modules
- ✓ Multi-caregiver summer scheduling

The upgrade path

Most families will arrive at Pair having used nothing — a Google Sheet for hours, WhatsApp for communication, and a downloaded PDF checklist from a blog. Starter solves their immediate problem. As they experience the platform, Pro features become naturally visible and the upgrade is intuitive rather than pushed. The expectation is that the majority of active families will be on Pro within 6 months of joining, with Premium appealing to multi-year hosts who understand the value of the full lifecycle. The au pair support section is always free — ensuring the product has genuine credibility with au pairs and travels word-of-mouth through their networks.

Revenue Projections

Scenario	US Families	Blended Price/Mo	ARR
Conservative (10% penetration, Starter-heavy)	2,500	\$9	\$270K
Base case (15% penetration, Pro-heavy)	4,500	\$14	\$756K
Optimistic (20% penetration, Pro/Premium mix)	7,000	\$16	\$1.34M
US + International (UK, DE, FR at 10%)	8,000	\$14	\$1.34M
Upside: Agency revenue-share (Year 2+)	—	30-40% of referred sub revenue	+\$80K-\$200K

Three Revenue Vectors

B2C Subscription: Host families pay \$9-\$22/month depending on tier. Au pairs access the support section free — driving word-of-mouth within communities that are tightly

networked and highly communicative. The freemium-to-paid conversion path is the primary growth engine in Years 1–2.

Agency Revenue Share (not white-label): Au pair agencies lack post-placement management tools and have strong relationships with newly-matched families — which is exactly Pair's highest-value acquisition moment. Rather than building a white-label product for agencies (which creates a competing surface and requires separate product investment), the preferred model is a revenue-share referral arrangement: agencies direct their families to Pair and receive 30–40% of subscription revenue in Year 1, stepping down to 20% in Year 2 and 10% in Year 3 as the relationship matures. The family's relationship is with Pair directly — full product, full brand, full data. The agency earns a passive recurring income stream for doing nothing more than a warm referral. This preserves product integrity, avoids channel conflict, and gives agencies a genuine commercial incentive to actively promote Pair to every family they match. A white-label arrangement would be considered only if an agency partner requires it as a condition of a large-scale deal — and only for a genuinely stripped-down version of the onboarding module, not the full product.

International Expansion: The US programme structure has close parallels in the UK, Germany, France, and the Netherlands. These markets collectively exceed the US installed base. Expansion is a Phase 3 initiative with state/country-specific compliance already built into the architecture from day one.

V1 Product Roadmap

Four phases, sequenced to get a testable product in front of families quickly — prioritising the highest-impact features first, and ensuring each phase is independently valuable rather than requiring the full product to be useful.

PHASE 0 Foundation & Validation

Months 1–2

Validate assumptions before building. Recruit 10–15 current or past host families for structured interviews. Confirm willingness to pay, rank feature priorities, and identify which school calendar integrations are most needed. Finalise technical stack. Recruit founding partners.

User Research

10–15 host family interviews; pain point ranking and pricing validation

PairTrack Deep-Dive

Full feature audit; partnership / acquisition conversation initiated

Technical Architecture

Stack decision; school calendar data source confirmed; auth model

Partner Recruitment

Technical co-founder; design partner; 1–2 advisors confirmed

Ship the two most differentiated features first: the onboarding toolkit (no competitor has this) and a time-tracking module that is J-1 compliant, school-calendar aware, and stipend-calculating (meaningfully better than PairTrack). Recruit 20–30 beta families. Begin freemium conversion testing.

Goals Wizard + Family Brief

Full onboarding document generator; shareable pre-arrival

Child Profile Builder

Per-child profiles; dietary, emotional, learning, medical fields

Week 1 Plan + Pre-Arrival Checklist

Structured landing plan with rationale prompts

Household FAQ

Family-seeded; au pair-addable; linked from interview phase

Split-Shift Hours Logger

Two time pairs/day; planned vs. actual; inline notes

Stipend Calculator

Auto-calculation; overtime/additional balance; weekly acknowledgement

School Calendar Integration

Top 20 US districts; No School / Early Release / Federal Holiday types

Compliance Alerts

45hr weekly / 10hr daily guardrails with soft and hard warnings

Communications Log

Shared neutral record; timestamped; exportable

Mobile-Responsive Web App

iOS + Android browser-compatible; native apps in Phase 2

Add the performance management layer, complete the planning module with holiday and summer capabilities, and launch the au pair support section. Begin converting beta users to paid subscriptions. Target: \$8K-\$12K MRR by end of phase.

Weighted Review Builder

Four categories; two-column format; five-level rubric with definitions

Baseline Comparison

Prior period rating carried forward; progress narrative

Bonus Trigger System

Links review outcomes to onboarding recognition commitments

Monthly Check-in Templates

Lighter-touch guided conversations between formal reviews

Difficult Conversation Guides

10 most common situations; pre-written warm frameworks

Relationship Health Pulse

Monthly private sentiment check-in for families

Au Pair Support Section

Receiving feedback; giving feedback; rights reference; FAQ

Summer Planner Mode

Day structure builder; anchor activities; multi-person coordination

Holiday Break Planner

Proactive reminders; alignment conversation prompts

Native iOS App (Beta)

Core modules; push notifications for compliance nudges

Paid Subscription Launch

Freemium onboarding; upgrade gate; first revenue

Expanded School Calendar

All 50 US states; semester toggle; manual district import

Complete the lifecycle with the interview toolkit and off-boarding modules. Initiate B2B conversations with at least one au pair agency. Assess international feasibility with UK and Germany as initial targets. Target: \$40K-\$80K ARR; evaluate funding path.

Interview Toolkit

11-section guided interview; candidate capture; comparison view

Candidate Question → FAQ Pipeline

Interview questions seed the household FAQ automatically

60-Day Off-boarding Countdown

Checklist; administrative prompts; child preparation guidance

Knowledge Transfer Document

Co-built with departing au pair; child-profile-anchored

Caregiver Handover Session Guide

Structured briefing prompts; summer-to-fall and year-end modes

Year-in-Review Generator

Auto-summary from logged data; shareable with departing au pair

Reference Letter Builder

Guided prompts; draws from review history; editable export

Family Retrospective

What to do differently; surfaces as context in next interview cycle

Agency Revenue-Share Pilot

1-2 agency partners; referral agreement; co-marketing on matched families

Android Native App

Full feature parity with iOS

International Research

UK + Germany programme rules; school calendar data sources

Car + Travel + Bonus Modules

Final onboarding sections; completes full family brief coverage

What We're Looking For in Partners

This concept is being developed by a founder with direct, multi-year experience of the au pair relationship — including building real templates that have been used and refined across multiple placements. We are looking for 1-3 partners to build this with.

Technical Co-founder / Lead Engineer

Full-stack web and mobile experience; comfortable owning product architecture as well as engineering. The Phase 1 MVP is a well-scoped, achievable build — not infrastructure-heavy. Equity-based in early phases, transitioning to market-rate as revenue grows.

Product Designer

Consumer app experience; genuine empathy for non-technical users under time pressure. The onboarding and feedback modules require real care in UX — these are emotionally significant interactions, not just forms. Portfolio of thoughtful, warm product design preferred.

Au Pair / Childcare Sector Advisor

Agency background, or deep community relationships in the host family space. Distribution is the hardest problem; community trust is the unlock. Au pair Facebook groups, agency relationships, and host parent networks are the primary go-to-market channels.

SaaS / Consumer Go-to-Market Advisor

Experience scaling B2C SaaS in family, parenting, or HR/people-management verticals. Understanding of freemium conversion, community-led growth, and the B2B2C revenue-share motion needed for agency distribution partnerships.

Why now?

The au pair market is growing, the matching space is saturated, and the management gap has never been addressed. The founding team has spent multiple years in this relationship, building real tools that prove the market exists and the problem is solvable. The regulatory environment is becoming more complex — proposed J-1 rule changes would increase compliance requirements, making a compliance-aware management tool more valuable, not less. The timing is right. The evidence base is unusually strong. And the space is genuinely empty.

Let's build this together.

A niche with loyal, vocal, well-networked users. A problem that has never been properly solved. A product grounded in real templates, not market research. If you see what we see — let's talk.
